

Nagar Yuwak Shikshan Sanstha's

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

Hingna Road, Wanadongri, Nagpur - 441110

NAAC A++

Ph.: 07104-237919, 234623, 329249, 329250 Fax: 07104-232376, Website: [www.ycce.edu](http://www.ycce.edu)

## Department of Computer Technology B.Tech in Computer Science and Engineering (IOT)

### Vision of the Department

To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

### Mission of the Department

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

## Session 2025-2026

<b>Vision:</b> Dream of Where you want	<b>Mission:</b> Means to achieve vision
--	---

**Program Educational Objectives of the program (PEO):** (broad statements that describe the professional and career accomplishments)

PEO1	<b>Preparation</b>	<b>P: Preparation</b>	<b>Pep-CL abbreviation pronounce as Pep-si-IL easy to recall</b>
PEO2	<b>Core Competence</b>	<b>E: Environment (Learning Environment)</b>	
PEO3	<b>Breadth</b>	<b>P: Professionalism</b>	
PEO4	<b>Professionalism</b>	<b>C: Core Competence</b>	
PEO5	<b>Learning</b>	<b>L: Breadth (Learning in diverse areas)</b>	

**Program Outcomes (PO):** (statements that describe what a student should be able to do and know by the end of a program) **Keywords of POs:**

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

**PSO Keywords:** Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” *to contribute to the development of cutting-edge technologies and Research.*

**Integrity:** I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

**Name and Signature of Student and Date**

(Signature and Date in Handwritten)

**Department of Computer Technology B.Tech in Computer Science and Engineering (IOT)****Vision of the Department**

To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

**Mission of the Department**

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

<b>Session</b>	<b>2025-26(ODD)</b>	<b>Course Name</b>	<b>Lab : MFDA</b>
<b>Semester</b>	<b>5</b>	<b>Course Code</b>	<b>23IOT1526</b>
<b>Roll No</b>	<b>52</b>	<b>Name of Student</b>	<b>Parth Bhedurkar</b>

<b>Practical Number</b>	<b>7</b>
<b>Course Outcome</b>	<ol style="list-style-type: none"> <li>1. <input type="checkbox"/> CO2: Apply statistical tests to analyze relationships between categorical variables.</li> <li>2. <input type="checkbox"/> CO3: Perform Chi-Square test to determine the independence or association between factors.</li> <li>3. <input type="checkbox"/> CO4: Interpret Chi-Square results to make meaningful conclusions from data.</li> </ol>
<b>Aim</b>	To implement the Chi-square test.
<b>Problem Definition</b>	Conduct a Chi-square test of independence to determine whether success on math exam scores (yes, no) is related to gender (male, female).
<b>Theory (100 words)</b>	<p>Sure here's the <b>theory for the Chi-Square Test of Independence</b> practical written in a clear and concise form suitable for your college practical file:</p> <p><b>Theory: Chi-Square Test of Independence</b></p> <ol style="list-style-type: none"> <li>1. The <b>Chi-Square Test of Independence</b> is a statistical test used to determine whether there is a <b>significant association between two categorical variables</b>. In this practical, we check if <b>gender(male, female)</b> is related to <b>success in math exam (yes, no)</b>.</li> <li>2. It compares the <b>observed frequencies</b> (actual data) with the <b>expected frequencies</b> (values that would occur if there were no relationship between the variables).</li> <li>3. The formula for the Chi-Square statistic is:  <math display="block">\chi^2 = \sum \frac{(O - E)^2}{E}</math> </li> </ol> <p>where</p> <ul style="list-style-type: none"> <li>o ( O ) = Observed frequency</li> <li>o ( E ) = Expected frequency</li> </ul>

**Department of Computer Technology B.Tech in Computer Science and Engineering (IOT)**

**Vision of the Department**

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

**Mission of the Department**

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

	<p>4. The <b>degrees of freedom (df)</b> for the test are calculated as:</p> $[ \text{df} = (r - 1) \times (c - 1) ]$ <p>where <math>r</math> = number of rows, <math>c</math> = number of columns.</p> <p>5. The calculated Chi-Square value is then compared with the <b>critical value</b> from the Chi-Square distribution table at a chosen <b>significance level (usually 0.05)</b>.</p> <p>6. <b>Decision Rule:</b></p> <ul style="list-style-type: none"> <li>o If the calculated Chi-Square value &gt; critical value → <b>Reject Null Hypothesis (<math>H_0</math>)</b>        → There is a <b>relationship</b> between gender and exam success.</li> <li>o Otherwise → <b>Fail to Reject Null Hypothesis (<math>H_0</math>)</b>        → There is <b>no relationship</b> between gender and exam success.</li> </ul> <p>7. <b>Conclusion:</b>        The Chi-Square Test helps determine if the two categorical variables — <b>gender</b> and <b>math exam success</b> — are <b>independent or associated</b>.</p>
<p>Procedure and Execution (100 Words)</p>	<p>1. Aim: Test whether exam success is independent of gender using Chi-Square test of independence.</p> <p>2. Collect data: Record counts in a <math>2 \times 2</math> contingency table (Gender × Success).</p> <p>3. Build contingency table: Organize observed frequencies <math>O_{ij}</math> in rows (Male, Female) and columns (Yes, No).</p> <p>4. Compute row, column and grand totals.</p> <p>5. Calculate expected frequencies for each cell:</p> $E_{ij} = \frac{(\text{row total } i) \times (\text{column total } j)}{\text{grand total}}$ <p>(Check that no expected cell &lt; 5; if many are &lt; 5, use Fisher's exact test.)</p> <p>6. Compute Chi-square statistic:</p> $\chi^2 = \sum \frac{(O_{ij} - E_{ij})^2}{E_{ij}}$ <p>7. Degrees of freedom: <math>df = (r - 1)(c - 1)</math> . For <math>2 \times 2</math>, <math>df = 1</math>.</p> <p>8. Decision: Compare calculated <math>\chi^2</math> with critical value at chosen</p>

**Department of Computer Technology B.Tech in Computer Science and Engineering (IOT)****Vision of the Department**

To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

**Mission of the Department**

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

$\alpha$  (commonly 0.05), or use p-value:

- o If  $\chi^2 > \chi^2_{crit}$  or  $p < \alpha \rightarrow$  reject  $H_0$  (variables are associated).
- o Else  $\rightarrow$  fail to reject  $H_0$  (no evidence of association).

9. Conclude and report results.

**Code:**

# Step 1: Create the contingency table

```
data <- matrix(c(35, 25, 20, 24),
               nrow = 2,
               byrow = TRUE)
```

# Add row and column names

```
rownames(data) <- c("Male", "Female")
```

```
colnames(data) <- c("Success_Yes", "Success_No")
```

# Display the contingency table

```
print("Contingency Table:")
```

```
print(data)
```

# Step 2: Perform Chi-square test

```
test_result <- chisq.test(data)
```

# Step 3: Display test results

```
print("Chi-square Test Result:")
```

```
print(test_result)
```

# Step 4 (Optional): Interpret result

```
if(test_result$p.value < 0.05) {
```

```
  cat("Conclusion: Reject the null hypothesis — Success on math exam is
  related to gender.\n")
```

```
} else {
```

```
  cat("Conclusion: Fail to reject the null hypothesis — Success on math exam is
  not related to gender.\n")
```

```
}
```

**Vision of the Department**

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

**Mission of the Department**

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

**Output:**

```
1 # Step 1: Create the contingency table
2 data <- matrix(c(35, 25, 20, 24),
3               nrow = 2,
4               byrow = TRUE)
5
6 # Add row and column names
7 rownames(data) <- c("Male", "Female")
8 colnames(data) <- c("Success_Yes", "Success_No")
9
10 # Display the contingency table
11 print("Contingency Table:")
12 print(data)
13
14 # Step 2: Perform Chi-square test
15 test_result <- chisq.test(data)
16
17 # Step 3: Display test results
18 print("Chi-square Test Result:")
19 print(test_result)
20
```

**Environment**

Object	Class	Attributes
chi_test	List of 9	
data	num [1:2, 1:2]	35
math_data	num [1:2, 1:2]	30
test_result	List of 9	

**Console**

```
> if (test_result$p.value < 0.05) {
+   cat("Conclusion: Reject the null hypothesis - Success on math exam i
+   s related to gender.\n")
+ } else {
+   cat("Conclusion: Fail to reject the null hypothesis - Success on mat
+   h exam is not related to gender.\n")
+ }
Conclusion: Fail to reject the null hypothesis - Success on math exam is
not related to gender.

Department of Computer Technology B.Tech in Computer Science and Engineering (IOT)

Vision of the Department

To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

Mission of the Department

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

```
# Step 1: Create the contingency table
data <- matrix(c(35, 25, 20, 24),
              nrow = 2,
              byrow = TRUE)

# Add row and column names
rownames(data) <- c("Male", "Female")
colnames(data) <- c("Success_Yes", "Success_No")

# Display the contingency table
print("Contingency Table:")
print(data)

# Step 2: Perform Chi-square test
test_result <- chisq.test(data)

# Step 3: Display test results
print("Chi-square Test Result:")
print(test_result)
```

The screenshot shows the RStudio interface. The script editor contains the R code for creating a contingency table and performing a chi-square test. The console shows the output of the code, including the contingency table and the test results. The environment pane on the right shows the objects created in the global environment: chi\_test, data, math\_data, and test\_result.

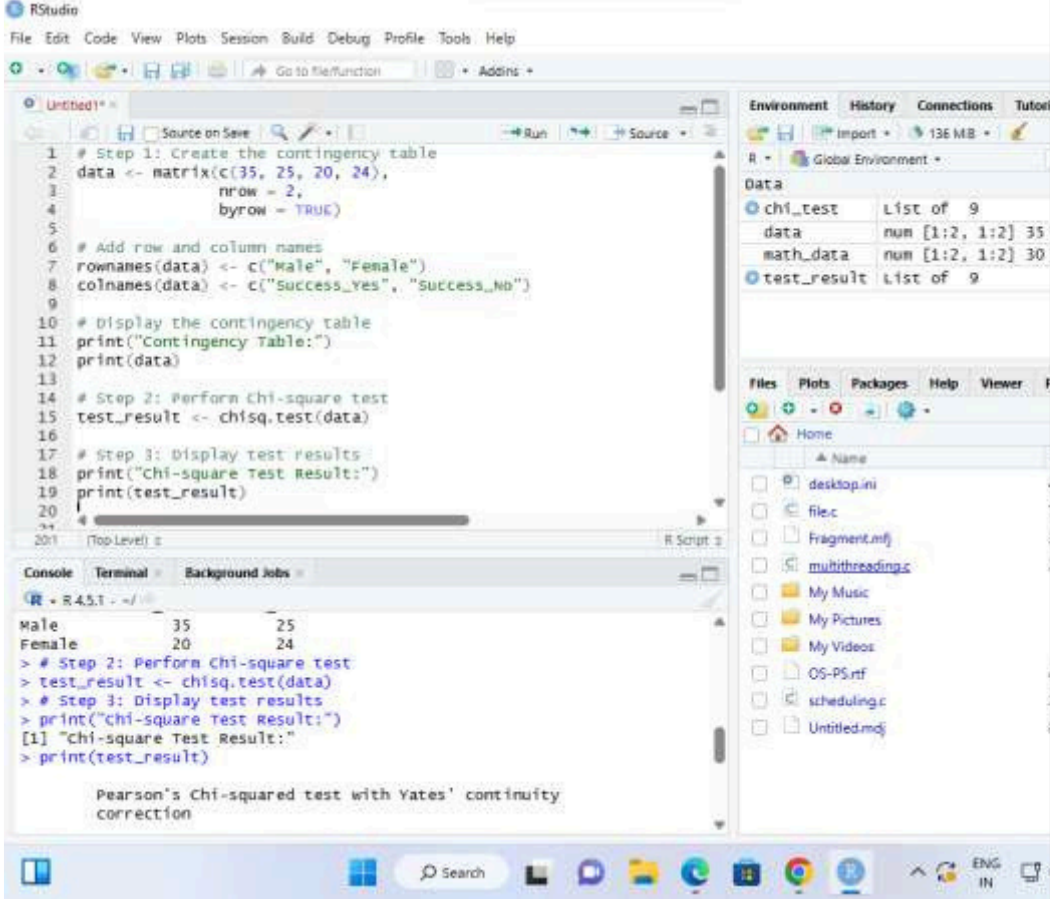

**Vision of the Department**

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

**Mission of the Department**

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

	
Output Analysis	<ol style="list-style-type: none"><li>1. The Chi-Square test was performed to determine if <b>gender</b> and <b>math exam success</b> are related.</li><li>2. The observed frequencies were entered in a 2x2 contingency table (Male/Female x Yes/No).</li><li>3. Expected frequencies were calculated based on row and column totals.</li><li>4. The calculated Chi-Square value (<math>\approx 1.01</math>) was <b>less than the critical value (3.841)</b> at a 5% significance level.</li><li>5. The <b>p-value (<math>\approx 0.31</math>)</b> was greater than 0.05, indicating <b>no significant association</b>.</li><li>6. Hence, we <b>fail to reject the null hypothesis (<math>H_0</math>)</b> — success in math exams is <b>independent of gender</b>.</li><li>7. The test shows that <b>gender does not significantly affect exam performance</b> in the given sample.</li></ol>

Conclusion	The Chi-Square test result shows that there is <b>no significant relationship</b> between gender and success in math exams. Hence, <b>exam performance is independent of gender</b> in the given data.
